SYLLABUS

M. Sc. (Mathematics)
(CBCS)
With effect from June-2016

(Reaccredited “A” Grade by NAAC)
(CGPA 3.05)
DEPARTMENT OF MATHEMATICS

Course Structure and Scheme of Examination
For Choice based Credit System (CBCS)
(With effect from June-2016)

- Course: M.Sc. (Mathematics)
- Eligibility for the admission: B.Sc. (Mathematics)
- Duration: Two years

Semester 1

### M.Sc.(Mathematics) - SEMESTER 1

- CMT - 1001 Algebra- I
- CMT - 1002 Real Analysis
- CMT - 1003 Topology- I
- CMT - 1004 Theory of Ordinary Differential Equations
- CMT - 1005 Seminar and Problem Session
- EMT - 1001 Classical Mechanics- I
M.Sc.(Mathematics) - SEMESTER 2

CMT - 2001 Algebra- II
CMT - 2002 Complex Analysis
CMT - 2003 Topology- II
CMT - 2004 Methods in Partial Differential Equations
CMT - 2005 Seminar and Problem Session
EMT - 2001 Classical Mechanics- II

* CMT – Core Subject, EMT –Elective Subject, PMT - Practical

♦ Passing Standard is 40% in Internal as well as in external examinations for all the courses.

♦ Student will have to clear internal as well as external examinations. (i.e. internal examination with minimum 40% and external examination with minimum 40% is compulsory) and student can earn credits mentioned against each course.

♦ There will be two internal examinations in each course and average of both the examinations will be considered.
M.Sc. SEMESTER 1

Sub. Code: **CMT-1001**
Core Sub. 1: **Algebra- 1**

**Unit 1**
Basic concepts of group theory:
Group, abelian group, cyclic group, normal subgroup, quotient group, permutation group,
Group isomorphism and their properties, Cayley’s theorem, Automorphisms of groups.

**Unit 2**
Direct Products, Finitely Generated Abelian Groups, Invariants of a finite Abelian Groups, Sylow Theorems.

**Unit 3**
Quick look at basic ring theory:
Euclidean ring, Quotient ring and zero divisors, Ideals, principal ideal, maximal ideal and prime ideal, Homomorphisms of ideals, Sum and Direct Sum of Ideals, Nilpotent and Nil Ideals.

**Unit 4**
Euclidean domains, Principal Ideal Domains, Unique Factorization Domains and Polynomial Rings over UFD. Polynomial rings over rational field, irreducible polynomials, Einstein irreducibility criterion.

**Reference Books:**

M.Sc. SEMESTER 1

Sub. Code: **CMT-1002**
Core Sub. 2: **Real Analysis**

**Unit 1**
Algebra of sets, $\sigma$-algebra of sets, Borel sets, Lebesgue outer measure, Measurable sets and Lebesgue measure, A nonmeasurable set, Measurable Functions, and Littlewood's three principles.

**Unit 2**

**Unit 3**
Differentiation of monotone functions, Functions of bounded variation, Differentiation of an integral, and Absolute continuity.

**Unit 4**

The course is covered by Chapter 1 Section 4, Chapter 2 Section 7, Chapter 3 (full), Chapter 4(full), Chapter 5 (Sections 1 to 4), and Chapter 6 (Sections 1 to 3) from the book Real Analysis by H. L. Royden, Third Edition, PHI Learning Private Limited (2009) New Delhi.

**Reference Books:-**

M.Sc. SEMESTER 1

Sub. Code: **CMT-1003**
Core Sub. 3: **Topology -1**

**Unit-1**
Topology, Open sets and closed sets, Finer and Coarser topology, Basis for a topology, Simply ordered topology.

**Unit-2**
Subspace topology, Product topology, Continuous functions, Homeomorphism.

**Unit-3**
Limit points, Closure, Interior points and interior, Convergent Sequence.

**Unit-4**
Metric topology, Uniform convergence, Topology of \( R^n \).

**Unit-5**
Connectedness, Local connectedness, Components, Path connectedness

The Course is covered by following Chapter 1, 2 and 3(Upto article 25) of Topology-A first course, J. M. Munkres, Printice Hall of India (2000).

**Reference Books:-**

M.Sc. SEMESTER 1

Sub. Code: CMT-1004
Core Sub. 4: Theory of Ordinary Differential Equations

Unit 1: Linear System of Differential Equations
The existence and uniqueness theorem, Linear Homogenous systems, Linear Non-Homogenous systems, Nonlinear system of first order equations.

Unit 2: Linear System with constant coefficients
The exponential of matrix, Eigen values and eigen vectors of matrices, calculation of fundamental matrix, two dimentional linear systems, some population problems, an electric circuit.

Unit 3: Series solutions of Linear Differential Equations
Review of properties of power series, second order linear equations with analytic coefficients, theorem on solutions in power series, singular points of linear differential equations, solutions about a regular singular point, exceptional cases, the Bessel equation and some properties of Bessel functions, singularities at infinity, irregular singular points with an introduction to asymptotic expansions.

Unit 4: Existence theory
Existence of solutions, uniqueness of solutions, continuation of solutions, the non linear simple pendulum, existence theory for system of first order equations and higher order equations, linear systems, dependence on initial conditions.
**Unit 5: Laplace Transforms**

This course is covered by *“Ordinary Differential Equations”*, First course by R. Brauer and J. A. Nohel, Second edition, Benjamin Inc.

**Reference Books:-**

M.Sc. SEMESTER 1

Sub. Code: EMT-1001
Elective Sub.1: Classical Mechanics -1

Unit 1: D’Alemberts principle and Lagrange’s Equations

• Conservation theorem for linear momentum and angular momentum for a particle.
• Conservation theorem for linear momentum and angular momentum for a system of particles.
• Classification of dynamical system.
• Constraints.
• Virtual displacement and principle of virtual work.
• Generalized force in holonomic system
• Mathematical expression for principle of virtual work
• D’Almbert’s principle
• Lagrange’s equation for holonomic system
• Lagrange’s equation for conservative non-holonomic system
• Problems on above topics

Unit 2: Variational principle and Lagrange’s equations

• Variational principle
• Calculus of variations
• Hamilton’s principle
• Derivation of Hamilton’s principle from Lagrange’s equation
• Derivation of Lagrange’s equations from Hamilton’s principle
• Cyclic co-ordinates
• Conservation theorems
• Problems on above topics

Unit 3: Two Body Central force problem
• Reduction to equivalent one body problem
• The equations of motion and first integrals
• The equivalent one dimensional problem and classification of orbits
• The inverse square law of force.

Unit 4: Equations of Motion and Rigid bodies
Independent co-ordinates of rigid bodies, generalized co-ordinates of a rigid bodies, Euler angles, Cayley-Klein parameters and related quantities, components of angular velocity along the body set of axes, Euler’s theorem on the motion of a rigid body, rate of change of a vector, the coriolis force, Euler’s equations of motion for a rigid body, finite rotations, infinitesimal rotations.

The course is covered by the above topics from the book:
Unit 1
Division ring and Field, Extension fields, algebraic and transcendental extensions, Splitting fields, Normal extensions, Multiple roots, Finite fields, Separable extensions.

Unit 2

Unit 3
Modules (Definitions and examples), Submodules and Operation on modules

Unit 4
Homomorphisms of modules and quotient modules, completely reducible modules, finitely generated modules.

Reference Books:

M.Sc. SEMESTER 2

Sub. Code: **CMT-2002**
Core Sub. 2: **Complex Analysis**

**Unit 1**

The extended complex plane and its spherical representation, analytic functions, bilinear transformations, their properties and classifications, Branches of many valued functions with special reference to $\arg z$, $\log z$ and $z^a$, elementary Riemann surfaces, definition and properties of conformal mapping.

**Unit 2**

Riemann – Steiltjes integral and its properties, line integral and its properties, fundamental theorem of calculus for line integral, Leibnitz rule, Taylor’s theorem, Cauchy’s integral formula, Cauchy’s theorem for analytic functions on an open disc, winding number of a closed rectifiable curve with respect to a point outside the curve and its properties, Cauchy’s integral formula first version and second version, Cauchy’s theorem first version, second version, third version and forth version.

**Unit 3**

Cauchy – Goursat theorem, Moreras theorem, Cauchy’s inequality, entire functions, Liouville’s theorem, identity theorem, fundamental theorem of algebra, maximum modulus theorem and minimum modulus theorem.

**Unit 4**

Schwartz lemma, meromorphic functions, argument principle, Rouche’s theorem, Open Mapping Theorem, Inverse function theorem.

**Unit 5**

Isolated singularities, classifications of singularities, Laurent’s series, residue theorem, evaluation of integrals.

**Reference Books:-**

4) Complex Analysis by S. Lang, Addison-Wesley, 1977.

M.Sc. SEMESTER 2

Sub. Code: **CMT-2003**
Core Sub. 3: **Topology- 2**

**Unit – 1:**
Separation Axioms: $T_1$ – Spaces, $T_2$ – Spaces (Hausdorff Spaces).

**Unit – 2:**
Separation Axioms: Regular Spaces, Completely Regular Spaces, Normal Spaces.

**Unit – 3:**
Compact Spaces, Locally Compact Spaces, Limit Point Compact Spaces.

**Unit – 4:**
Sequentially Compact Spaces, Compact Metric Spaces.

**Unit – 5:**
Complete Metric Spaces.

**Reference Books:-**

1) Topology – A First Course, J.R.Munkres, Prentice Hall of India (2000). Chapter 3 (Article no. 26 to 29), Chapter 4 (Article no. 31,32,33 and 35) and Chapter 7 (Article no. 43)

M.Sc. SEMESTER 2

Sub. Code: **CMT-2004**

Core Sub. 4: **Methods in Partial Differential Equations**

**Unit 1**
Surfaces and Curves in three dimensions, Simultaneous differential equations of the first order and the first degree in three variables, Methods of solutions of \( \frac{dx}{P} = \frac{dy}{Q} = \frac{dz}{R} \), Orthogonal trajectories of a system of curves on a surface. Pfaffian Differential forms and equations, Solution of Pfaffian differential equations in three variables, and Miscellaneous problems.

**Unit 2**
Partial differential equations, Origins of First-order partial differential equations, Linear equations of the first order, Integral Surfaces passing through a given curve, Surfaces orthogonal to a given system of surfaces.

**Unit 3**
Non-linear partial differential equations of the first order, Charpit's method, Special types of first order equations, Solutions satisfying the given conditions, Jacobi's method, and Miscellaneous problems.

**Unit 4**
The origin of second order equations, Linear partial differential equations with constant coefficients, and Equations with variable coefficients.

This course is covered by the relevant portions from the book ‘Elements of Partial Differential Equations’ by Ian Sneddon, McGraw-Hill Book Company.

**Reference Books:-**
Unit 1: The Rigid Body Equations of Motion

Angular momentum and kinetic energy of motion about a point, the inertia tensor and moment of inertia, the heavy symmetrical top with one point fixed.

Unit 2: Special Relativity in Classical Mechanics

The basic program of special relativity, The Lorentz transformation, Lorentz transformations in real four dimensional spaces, Further descriptions of the Lorentz transformation, Covariant four – dimensional formulations, The force and energy equations in relativistic mechanics.

Unit 3: Hamilton’s equation of Motion

Derivation of Hamilton’s equation of motion, Routh’s procedure, derivation of Hamilton’s equation from Hamilton’s Principle, principle of least action, problem related to above topics.

Unit 4: Canonical transformations and Generating functions

Poisson’s brackets and their properties, Hamilton-Jacobi theory, problem related to above topics.

The course is covered by the above topics from the book:

SYLLABUS

* CMT – Core Subject, EMT – Elective Subject, PMT - Practical

- Passing Standard is 40% in Internal as well as in external examinations for all the courses.
- Student will have to clear internal as well as external examinations. (i.e. internal examination with minimum 40% and external examination with minimum 40% is compulsory) and student can earn credits mentioned against each course.
- There will be two internal examinations in each course and average of both the examinations will be considered.
M.Sc. SEMESTER 3

Sub. Code: CMT-3001
Core Sub. 1: Prog. In C & Numerical Methods

Unit 1
Constants, variables, C tokens, keywords, identifiers, declaration of variables, operations and expressions, managing input and output operations and formatted output.

Unit 2
Decision making and branching statements like – if then else, if then switch, go to and loops, jump in loops

Unit 3
One or two dimensional array and their initialization, handling of character strings, User defined functions, structure, unions, pointers and file management in C.

Unit 4

Unit 5
Solution of simultaneous algebraic equations introduction, Gauss elimination method, ill conditioned equations, refinement of the solution obtained by Gaussian elimination, Gauss-Seidel iterative method, comparison of direct and iterative methods. Interpolation introduction, Lagrange interpolation, difference tables.

Reference Books:-
M.Sc. SEMESTER 3

Sub. Code: CMT-3002
Core Sub. 2: Functional Analysis

Unit 1
Normed linear spaces, Banach spaces, Quotient space of a normed linear spaces and its completeness, bounded linear transformations, normed linear spaces of bounded linear transformations, dual spaces with examples.

Unit 2
Weak convergence in normed linear spaces, equivalent norms, Riesz lemma, Basic properties of finite dimensional normed linear spaces and compactness, weak convergence in normed linear spaces, reflexive spaces.

Unit 3
Uniform Boundedness theorem and its consequences, open mapping theorem, closed graph theorem, Hahn-Banach theorem for normed linear spaces, compact operations, solvability of linear equations in Banach spaces, the closed range theorem.

Unit 4
Inner product space, Hilbert space, orthonormal sets, Bessel’s inequality, complete orthonormal sets, Parseval’s identity, structure of Hilbert spaces, projection theorem, Riesz representation theorem for bounded linear functional on Hilbert spaces, reflexivity of Hilbert spaces.

Unit 5

This course is covered by relevant portions from the text “Introductory Functional Analysis with Applications”, John Wiley and Sons, Newyork, 1978.

Reference Books:-

M.Sc. SEMESTER 3

Sub. Code: CMT-3003
Core Sub. 3: Number Theory - 1

Unit 1
Divisibility, Prime Numbers.

Unit 2
Congruences, Linear Congruences and their solutions, Chinese Remainder Theorem, Degree of a Congruence relation and related theorems.

Unit 3
Primitive rules and related Theorems and Examples, Related Congruences and their solutions.

Unit 4
Largest Integer functions and related results, Arithmetic Functions.

Reference Books:

1. THE THEORY OF NUMBERS (Authors: Ivan Niven, Herbert S. Zuckerman, Hugh L. Montgomery)
2. NUMBER THEORY (Authors: Z. I. Borevich and I. R. Shafarevich)
3. AN INTRODUCTION TO THE GEOMETRY OF NUMBERS (Authors: J. W. S. Cassels)
4. HISTORY OF THE THEORY OF NUMBERS (Authors: L. E. Dickson)
M.Sc. SEMESTER 3
Sub. Code: CMT-3004
Core Sub. 3: Discrete Mathematics

Unit 1
Semigroups and Monoids, Homomorphism of Semigroups and Monoids, Products and Quotients of semigroups, Fundamental theorem of Homomorphism of Semigroups, Subsemigroups and submonoids. Relations, Transitive Closure and Warshall's Algorithm

Unit 2
Lattices as partially ordered sets, Properties of Lattices, Lattices as algebraic systems, Sublattices, Direct product and Homomorphisms of Lattices, Some Special Lattices, Finite Boolean Algebras, Functions on Boolean Algebras, Karnaugh Map Method.

Unit 3
Languages and Grammars, Finite State Machines, Semigroups, Machines and Languages, Moore Machines, Simplification of Machines, Moore Machines and Regular Languages, Kleene's Theorem, Pumping Lemma, Nondeterministic Finite State Automata.

Unit 4
Propositions and Logical operations, Truth tables, Conditional statements and Logical Equivalence, Quantifiers, Rules of Inference.

Unit 5
Elements of Coding Theory, The Hamming Metric, The Parity-Check and Generator Matrices, Group Codes: Decoding with Coset Leaders, Hamming Matrices.

Reference Books:-

M.Sc. SEMESTER 3
Sub. Code: EMT-3011
Elective Sub. 1: Differential Geometry

Unit 1

Unit 2
Local theory of surfaces – parametric patches on surface. First Fundamental form and arc length.

Unit 3
Normal curvature, Geodesic curvature and Gauss formulae, Shape operator $L^p$ of a surface at a point, vector field a curve.

Unit 4
Second and third fundamental forms of a surface, Weingarten map, principal curvatures, Gaussian curvature, mean and normal curvatures.

Unit 5
Riemannian curvatures, Gauss theorem of Egregium, isometry groups and fundamental existence theorem for surfaces.

Reference Books:-
M.Sc. SEMESTER 3

Sub. Code: EMT-3021
Elective Sub. 2: Special Theory of Relativity and Tensor Analysis

Unit 1
• Newtonian Relativity (Galilean Transformation)
• Lorentz transformation
• Michelson – Morley experiment

Unit 2
• Length Contraction
• Time dilation
• Relativistic law of addition of velocities
• Equivalence of mass and energy
• Problems related to above topic

Unit 3
• Tensor Algebra
• Vector field in affine and Riemann space

Unit 4
• Christoffel Symbols
• Tensor Analysis

Books:-
1. Related topics of Unit 1 and Unit 2 will be covered from the book “Special Relativity” by W. Rindler. Pub.: Oliver and Bosed.

Reference Books:-
1. The Special theory of Relativity – Benerji and Benarjee. Pub.: Prentice Hall India Ltd.
M.Sc. SEMESTER 4

Sub. Code: CMT – 4001
Core Sub. 1: Linear Algebra

Unit 1
The Algebra of linear transformations, Characteristic roots, Matrices.

Unit 2
Canonical Forms: Triangular Form, Nilpotent linear transformations, Invariants of a nilpotent linear transformation.

Unit 3
Canonical Forms: The primary decomposition theorem, Jordan Form, Rational canonical Form.

Unit 4
Trace and Transpose, Determinants, Cramer's rule, Cayley-Hamilton theorem, a quick review of inner product spaces, Hermitian, Unitary and Normal transformations.

Unit 5
Real Quadratic Forms, Sylvester's law of inertia, Bilinear Forms, Symmetric Bilinear Forms, Skew-Symmetric Bilinear Forms, Groups preserving Bilinear Forms.

Reference Books:-

1. N. Herstein, *Topics in Algebra*, 2/e, Wiley Publication, 1975. (For Unit 1 to Unit 4)
M.Sc. SEMESTER 4

Sub. Code: CMT-4002
Core Sub. 2: Integration Theory

Unit 1
Measures spaces, Measurable functions, integration, general convergence theorems.

Unit 2
Signed measures, Positive sets, negative sets, null sets and their properties, Hahn-Decomposition Theorem, mutually singular measures, Jordan-Decomposition for a signed measure.

Unit 3
Measure absolutely continuous with respect to another measure, Radon-Nikodym theorem for measure and for signed measure, Lebesgue decomposition theorem, outer measure on a set, algebra of sets, Caratheodary extension theorem.

Unit 4
Product measure, structure of measurable sets in the product measure space, Fubini’s theorem, Fonelli’s theorem, $L^p(\mathbb{R})$ and Riesz Representation theorem for bounded linear functional on $L^p(\mathbb{R})$, Baire measure on the real line, Lebesgue Stieltjes integral of Borel measurable function with respect to monotonically increasing function.

Unit 5
Locally compact Hausdorff spaces, Baire and Boral measures, continuous functions with compact support, regularity of measures on locally compact Hausdorff spaces, integration of continuous functions with compact support, Riesz Markov-theorem.

Reference Books:-

M.Sc. SEMESTER 4

Sub. Code: CMT-4003
Core Sub. 3: Number Theory - 2

Unit 1
Farey Fractions, Irrational numbers, Farey Fractions and Approximation of Irrationals by Rationals.

Unit 2
Continued Fractions (Finite and Infinite), Approximations of Irrationals by Rationals, Hurwitz’s Theorem.

Unit 3
Periodic Continued Fractions, Pell’s Equations.

Unit 4
Diophantine Equations, Pythagorean Triplets, Some other Examples.

Reference Books:-

1. THE THEORY OF NUMBERS (Authors: Ivan Niven, Herbert S. Zuckerman, Hugh L. Montgomery)
2. NUMBER THEORY (Authors: Z. I. Borevich and I. R. Shafarevich)
3. AN INTRODUCTION TO THE GEOMETRY OF NUMBERS (Authors: J. W. S. Cassels)
4. HISTORY OF THE THEORY OF NUMBERS (Authors: L. E. Dickson)
Unit 1
Graph, degree of a vertex, path, circuit, connected and disconnected graphs, components, adjacency and incidence matrix.

Unit 2
Euler circuits, Euler graph, Hamiltonian Paths and circuits.

Unit 3
Trees and their characterizations, Cut-Sets and Cut-Vertices

Unit 4
Planar Graphs, Kuratowski’s two graphs, Different representation of planarity, Detection of Planarity.

Unit 5
Coloring of graphs, chromatic number, chromatic polynomial, the four color problem matching

Unit 6
Graph theory in Operation Research: transport networks, extension of Max-Flow, Min-Cut theorem, minimal cost flows.

The syllabus is a covered from chapters 1 & 2 (for quick review), Chapter 3 (3.1 to 3.6), 4 (4.1 to 4.6), 5 (5.1 to 5.5), 8 (8.1 to 8.4) and 14(14.1 to 14.3) from “Graph theory with application to Engineering & computer science” by Narsingh Deo, Prentice – Hall of India New Delhi.

Reference Books:-
M.Sc. SEMESTER 4

Sub. Code: EMT-4011
Elective Sub. 1: Financial Mathematics

Unit 1
Basic option theory, Types of options, interest rates and present value, Asset price

Unit 2
Random walk, Ito’s lemma, Black-Sholes model, arbitrage theorem, option values

Unit 3
The Black – Sholes formulae, hedging the practice, partial differential equations and Black – Sholes formulae.

Unit 4
Variations in Black – Sholes model to include dividends as well as forward and future contracts, American Options.

Reference Books:-
M.Sc. SEMESTER 4

Sub. Code: EMT-4021
Elective Sub. 2: General Theory of Relativity & Cosmology

Unit 1: The Gravitational Field Equation in Empty Space
- Criteria for the field equations.
- The Riemann curvature tensor and its properties.
- The Bianchi identities.

Unit 2: The Schwarzschild solution and its consequences, experimental tests of General Relativity
- The Schwarzschild solution
- The Schwarzschild solution in isotropic co-ordinates
- The General Relativistic Kepler problem and the perihilc shift of Mercury.
- The trajectory of light ray in Schwarzschild field.
- The Schwarzschild radius, Kruskal co-ordinates and the Black hole.

Unit 3: The Kerr Solution
- The Schwarzschild and Kerr solution
- The Kerr solution and Rotation.

Relevant topics will be covered from “Introduction to General Relativity”. – By R. Adees, M. Bazin & M. Schiffer.

Reference Books:-
M.Sc. SEMESTER 4

Sub. Code: EMT – 4031
Elective Sub. 3: **Commutative Ring Theory**

**Unit 1**
Rings and ring homomorphisms, Ideals, Quotient rings, Zero-divisors, Nilpotent elements, Units, Prime ideals and Maximal ideals, Nilradical and Jacobson radical, Operations on ideals, Extension and contraction.

**Unit 2**
Modules and module homomorphisms, Submodules and quotient modules, Operation on Submodules, Direct sum and product, Finitely generated modules, Exact sequences, Rings and modules of fractions, Local properties, Extended and contracted ideals in rings of fractions.

**Unit 3**

**Unit 4**
Noetherian modules, Artinian modules, Composition series of a module, Noetherian rings, Hilbert's basis theorem, Primary decomposition in Noetherian rings.

**Unit 5**
Artin rings, Structure theorem for Artin rings, Discrete Valuation rings, Dedekind domains, fractional ideals.

**Text Book:-**

*Introduction to Commutative Algebra* by M. F. Atiyah and I. G. Macdonald, Addison-Wesley Publishing Company, 1969. (Chapter 1 to Chapter 9)

**Reference Books:-**
M.Sc. SEMESTER 4

Sub. Code: EMT – 4041
Elective Sub. 4: Introduction to Mathematical Cryptography

Unit 1
Modular arithmetic, the language of rings and fields, finding multiplicative inverses in \( \mathbb{Z}/n \), Fermat’s little theorem, the primitive root theorem for \( \mathbb{F}_p \).

Unit 2

Unit 3
Euler's formula for powers in \( \mathbb{Z}/(pq) \), and the RSA cryptosystem. How to find large primes: the Prime Number Theorem and some Monte Carlo Methods (e.g. the Miller-Rabin test). Algorithms for factoring large integers: Pollard's \( \frac{p - 1}{2} \) algorithm.

Unit 4
Elliptic curves. Smoothness, the point at infinity, the group law. Using elliptic curves for cryptography. Classification of finite abelian groups. Integer factorization using elliptic curves (Lenstra's method).

Text Book:-

An Introduction to Mathematical Cryptography by Jeffrey Hoffstein, Jill Pipher & Joseph H. Silverman, Springer – Verlag, 2008. (Chapters 1, 2, 3 & 5)
